

AARON KYLE VILLEGAS

Data Analyst | SQL, Tableau

akvilleg@uci.edu | aaronvillegas.vercel.app | linkedin.com/in/aaronvillegas1 | github.com/AaronVillegas5

PROFESSIONAL SUMMARY

Applied and Computational Mathematics graduate (Data Science specialization) who builds interactive dashboards and automated reports from raw data. Built Python and SQL reporting models across retail locations that uncovered a 69% Christmas-week sales lift and showed the top 5 of 45 stores drive 21.6% of revenue. Uses SQL and Python (Pandas) to clean and validate data before reporting, and explains findings to non-technical audiences.

EDUCATION

University of California, Irvine

June 2026

Bachelor of Science, Applied and Computational Mathematics (Data Science)

GPA: 3.911 | Completed B.S. in 3 Years (Graduated Early) | Dean's Honor List | Howard Tucker Award in Mathematics | Cum Laude

Relevant Coursework: Statistical Methods, Data Science Programming, Optimization

TECHNICAL SKILLS

- Core Analytics & BI Tools:** SQL (PostgreSQL, BigQuery), Tableau, Power BI, Excel (XLOOKUP, VLOOKUP, INDEX/MATCH, Pivot Tables, Data Normalization), Python (Pandas), Git
- Domain & Operational Methods:** KPI Dashboards, Data Validation, Data Cleaning, Exploratory Data Analysis

RELEVANT EXPERIENCE

Humn Solutions | *Software Development Intern*

September 2026 - Present | Remote

- Built an automated data pipeline using Python and Supabase to collect, rank, and summarize daily data from 13+ public sources.
- Translated manager requirements from regular standups and email feedback into written proposals with architecture options, cost estimates, risks and phased roadmaps.
- Delivered stakeholder-requested changes to a daily production report, including a 24-hour recency rule after a stale headline and a plain-English why-it-matters card for business readers.

Handshake AI | *AI Benchmark Engineering Fellow*

July 2026 - August 2026 | Remote

- Developed automated verification test suites applying baseline trend modeling and median aggregation to evaluate outputs against strict requirements, saving 3 to 4 engineering hours per incident by replacing manual debugging.
- Created test datasets with planted data errors (time zone shifts, unit glitches) to simulate silent data pipeline failures and test anomaly detection.

DATA ANALYTICS PROJECTS

Walmart Retail Sales & Inventory Strategy Analysis

April 2026

Python, SQL, Tableau, Pandas

- Developed automated reporting models using Python and SQL to evaluate business KPIs across retail locations, translating raw data into insights that uncovered a 69% Christmas-week sales lift and showed the top 5 of 45 stores drive 21.6% of revenue.
- Built interactive dashboards in [Tableau](#) tracking 9+ core business KPIs (YoY growth, demand variability, store rankings, 30-day rolling average) to model seasonal staffing requirements and evaluate process improvements.
- Analyzed store-level demand volatility to track consumer purchasing patterns, recommending flexible inventory and supply chain strategies for volatile locations.

Global Superstore Data Normalization & Analytics Dashboard

August 2026

Microsoft Excel (XLOOKUP, VLOOKUP, INDEX/MATCH, Pivot Tables, Data Normalization)

- Normalized a flat CSV dataset of 51,290 global records across 27 attributes into a 3-table relational schema (Orders Fact, Customers Dim, Products Dim), mapping primary/foreign keys and executing XLOOKUP/VLOOKUP to eliminate data redundancy.
- Derived missing Order & Ship Date fields and built interactive Excel Pivot Table dashboards with nested IF logic to evaluate regional profitability, product category performance, and fulfillment lead times across 50K+ transactions.

Macroeconomic & Climate Analytics Platform (Macro Data Pipeline)

April 2026 - Present

Python, SQL, BigQuery, PostgreSQL

- Built an automated Python data-prep workflow that independently sourced and structured 9M+ time-series records from multiple APIs (FRED, Open-Meteo) into PostgreSQL and BigQuery for analysis.
- Wrote SQL window functions to calculate core business KPIs (30-day rolling averages, year-over-year variances) for trend reporting.
- Automated data cleaning, timestamp standardization, and deduplication workflows, enforcing schema bounds checks and automated data-quality tests to improve dataset reliability for reporting.

LEADERSHIP & CAMPUS EXPERIENCE

UCI Recreation Center | *Rock Wall Supervisor and Belayer*

April 2024 - June 2026 | Irvine, CA

- Supervised and trained climbers; analyzed facility check-in data to optimize scheduling and reduce wait times.

Associated Students at UCI (ASUCI) | *Student Body Intern*

September 2023 - June 2024 | Irvine, CA

- Coordinated 4+ large-scale speaker events (80-100 attendees) and communicated with 80+ alumni and professionals to ensure diverse, high-impact presentations.
